## **Engine, description**

The engine is a vertical, water-cooled, in-line, three-cylinder, four-stroke diesel with eddy chamber injection. It is a low emission engine to American EPA Guideline Tier IV.

The engine serial number is stamped on the name plate, on the top of the valve cover. The engine model designation and serial number must be indicated when ordering spare parts.

The direction of rotation viewed from the flywheel is anticlockwise. Ignition sequence: 1-3-2 (cylinder no. 1 on flywheel side).

# **Engine, removing**

#### Op nbr 210-070

Lifting device

Seat belt, 2m

Seat belt, 0.5m

2 Shackle

The work involves handling heavy components - failure to stay alert may result in severe crushing injuries.

- 1. Place the machine in the service position 1, see  $\frac{191 \text{ Service position 1}}{1}$
- 2. Set the battery disconnect switch to the Off position.

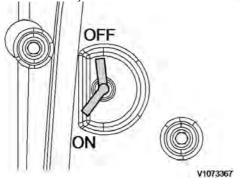

Figure 1
Battery disconnection switch

3. Turn fuel cock to position C.

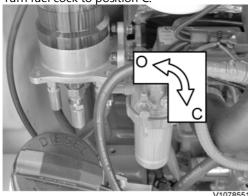

Figure 2 Main fuel filter

4. Turn fuel cock to position C.

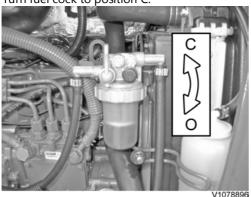

Figure 3 Water separator

5. Remove upper left-hand side panel.

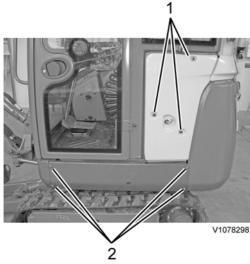

Figure 4 Left-hand side panels, remove

- 1. Attaching screws
- 2. Attaching screws
- 6. Remove lower left-hand side panel.

If the battery's plus terminal is short-circuited to the minus terminal or to the chassis, there is a risk of explosion or fire. Therefore, always protect the battery terminals.

7. Disconnect ground terminal (1) at battery.

Figure 5 Battery, disconnect terminals

- 1. Ground terminal (- pole)
- 2. Positive terminal (+ pole)
- 8. Remove pole cover at the positive terminal (2) of the battery and disconnect terminal.
- 9. Remove battery holder.

Figure 6 Battery holder, remove

- 10. Carefully lift battery out of superstructure.
- 11. Remove ground cable (1).

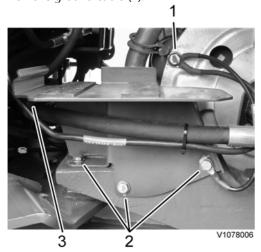

Figure 7 Remove battery bracket

- 1. Ground cable
- 2. Attaching screws
- 3. Hose clamp
- 12. Remove hose clamp (3), fixing bolts (2) and bracket.
- 13. Remove hose clamp at underside of battery disconnection switch.

Figure 8 Hose clamp, remove

14. Remove fixing bolts (1) for upper rear panel and remove upper rear panel including engine hood.

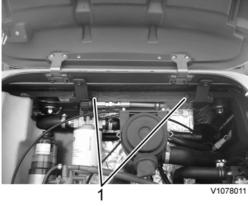

Figure 9 Remove rear panel

1. Attaching screws

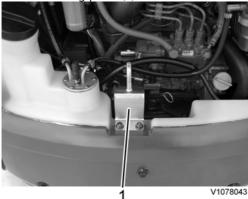

Figure 10 Closing panel, remove

1. Closing panel

16. Remove cover plate (1)

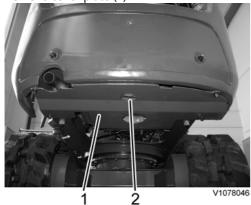

Figure 11 Cover plate, remove

- 1. Cover plate
- 2. Drain plug, fuel tank
- 17. Remove drain plug (2) and drain fuel tank into a suitable catchment container.

### **NOTICE**

Do the work in an environmentally safe manner.

- 18. Drain hydraulic tank, see 173 Hydraulic system, changing oil
- 19. Remove nuts (1) from rear cab fixing bolts.

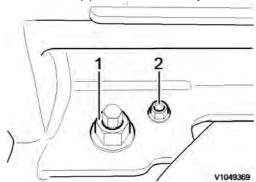

Figure 12
Cab mounting

- 1. Nuts, cab fixing bolts
- 2. Connecting bolt cab cab platform

The parts are heavy. Take appropriate safety precautions.

20. Using suitable lifting gear, raise cab at rear eyelets by approx. 3 cm (1.18 in) and secure.

Figure 13 Cab with lifting tool NOTE!

Weight approx. 260 kg (573.2 lbs)

- 21. Remove radiator, see <u>261 Radiator, removal</u>
- 22. Remove alternator, see <u>321 Alternator, removing</u>.
- 23. Detach air intake hose (1) at engine.

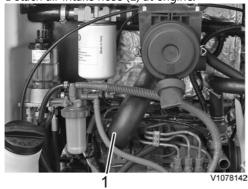

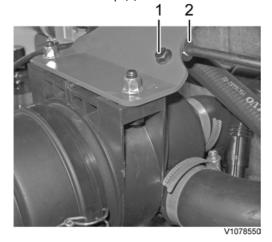

Figure 14
Engine with ancillaries

- 1. Air intake hose
- 24. Remove hose clamp (2) from throttle cable.

#### Figure 15 Hose clamp, remove

- 1. Mounting screw
- 2. Hose clamp, throttle cable
- 25. Detach hose for hydraulic tank ventilation at tank.

Figure 16 Hose line, remove

26. Remove hose clamp (2) and connecting hose (3) with grommet (4).

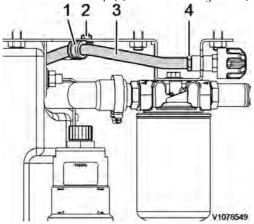

Figure 17 Hydraulic tank ventilation, remove

- 1. Hose clamp
- 2. Screw
- 3. Jumper hose
- 4. Grommet
- 27. Withdraw connecting cable at air filter casing sensor.
- 28. Remove air filter casing with bracket (1).

Figure 18 Air filter

1. Carrier

29. Detach cable at fixing and at lever.

Figure 19 Cable, remove

30. Remove hose (4) at inlet to hydraulic oil filter.

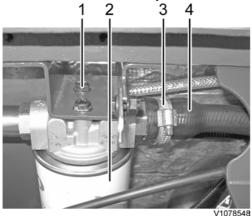

Figure 20 Return filter

- 1. Mounting screw
- 2. Hydraulic oil filter inc. filter holder
- 3. Hose clamp
- 4. Hose assembly

- 31. Remove fixing bolts (1) and remove hydraulic oil filter.
- 32. Remove fixing bolt (1) for main fuel filter.

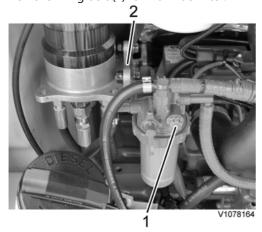

Figure 21 Main fuel filter, remove

- 1. Main fuel filter
- 2. Leak-oil filter
- 33. Remove fixing bolts and remove leakage oil filter (2).
- 34. Remove hydraulic hose at leakage oil filter.

### **NOTICE**

When a hose has been disconnected, plug both the hose and the connection immediately. The hoses should be marked for correct connection.

35. Guide leakage oil lines through the opening in the hydraulic oil tank bracket.

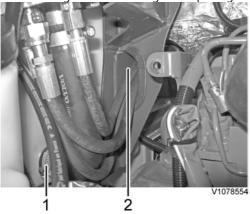

Figure 22
Opening, hydraulic oil tank bracket

- 1. Hose clamp, return line
- 2. Opening, hydraulic oil tank bracket
- 36. Release hose clamp (2) and remove suction hose (3) from hydraulic pump.

Collect draining oil.

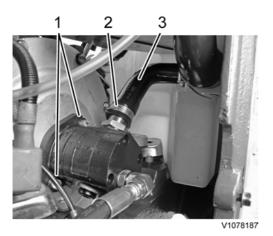

Figure 23 Hydraulic pump, remove

- 1. Attaching screws
- 2. Hose clamp
- 3. Suction line
- 37. Remove hydraulic pump
- 38. Release pipe bracket (1) and connecting clamp (2) and remove exhaust tailpipe (3).

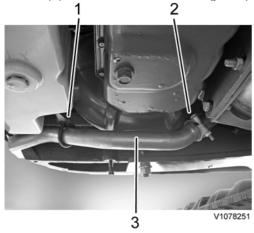

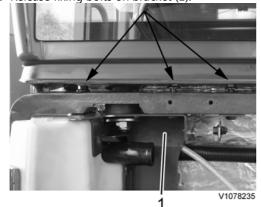

Figure 24 Exhaust tailpipe, remove

- 1. Pipe bracket
- 2. Clamp
- 3. Exhaust tailpipe

39. Release fixing bolts on bracket (1).

#### Figure 25 Bracket, remove

- 1. Bracket
- 40. Remove upper fixing bolt (2) for left transport bracket (1) on engine, release lower fixing bolt (3) and swivel the bracket forwards.

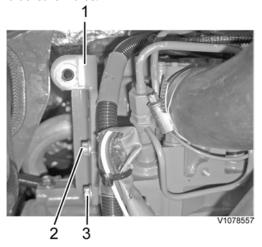

Figure 26 Transport bracket, swivel

- 1. Transport bracket
- 2. Upper fixing bolt
- 3. Lower fixing bolt
- 41. Remove hydraulic oil tank bracket together with hydraulic oil tank.
- 42. Swivel the transport bracket into the original position and install bolts (2, 3).
- 43. Remove bolts (1) for engine mount

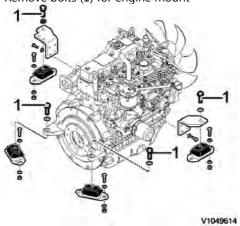

Figure 27 Engine mount

- 1. Screw
- 44. Remove hose clamp (1) on engine mount.

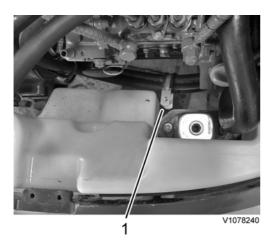

Figure 28 Hose clamp, remove

1. Clamp, coolant hoses

45. Remove engine mount rear/right

V1079078

Figure 29 Engine mount, remove

46. Remove heating hoses on engine.

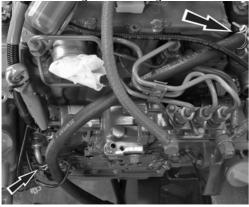

Figure 30

**Remove coolant hoses** 

## NOTICE

Do the work in an environmentally safe manner.

- 47. Detach hose lines from fuel tank and withdraw.
- 48. Remove connecting cable from fill level sender (SE 2303) and fuel pump (MO 2303).

- 49. Detach the fuel lines at the injection pump.
- 50. Release fuel feed pump holder, remove with hoses and filter.

Figure 31 Fuel feed pump, remove

51. Remove fixing bolt (1) on rear panel, or counterweight bolt.

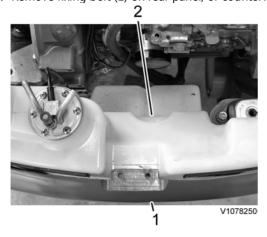

Figure 32 Remove fuel tank

- 1. Fixing bolt, rear panel / counterweight
- 2. Fixing bolt, fuel tank
- 52. Remove fixing bolt (2) for fuel tank.
- 53. Move engine on mounts and remove fuel tank.
- 54. Remove central plug for engine wiring loom (CN2101) and supply line to preheat system (HE 2501).

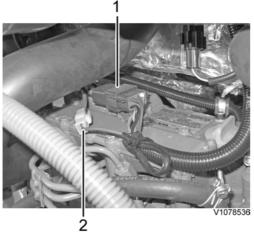

Figure 33 Engine pin plug connections, separate

55. Separate connection (5) from panel.

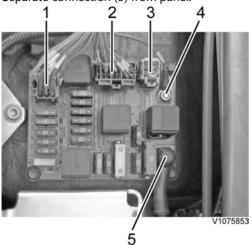

Figure 34 Panel

- 1. Port CB3703
- 2. Port CB3702
- 3. Port CBAECU (Option)
- 4. Port CB3704
- 5. Port CB3701

56. Remove engine mounts rear/left

Figure 35 Remove engine mounts NOTE!

Secure engine against tilting.

Lift objects only with the lifting tackle provided for this purpose.

57. Attach the engine to suitable lifting gear.

NOTE!

Weight engine, approx.: 130 kg (286.6 lbs)

Figure 36 Attach lifting gear

58. Carefully lift out the engine and deposit on a suitable support.
