# VEHICLE SAFETY CERTIFICATION LABEL

#### DESCRIPTION

A vehicle safety certification label (Fig. 1) is attached to every DaimlerChrysler Corporation vehicle. The label certifies that the vehicle conforms to all applicable Federal Motor Vehicle Safety Standards. The label also lists:

- Month and year of vehicle manufacture.
- Gross Vehicle Weight Rating (GVWR). The gross

front and rear axle weight ratings (GAWR's) are based on a minimum rim size and maximum cold tire inflation pressure.

- Vehicle Identification Number (VIN).
- Type of vehicle.
- Type of rear wheels.
- Bar code.
- Month, Day and Hour (MDH) of final assembly.
- Paint and Trim codes.
- Country of origin.

The label is located on the driver-side door shut-face.

# VEHICLE IDENTIFICATION NUMBER

#### DESCRIPTION

The Vehicle Identification Number (VIN) plate is located on the lower windshield fence near the left A-pillar. The VIN contains 17 characters that provide data concerning the vehicle. Refer to the VIN decoding chart to determine the identification of a vehicle.

The Vehicle Identification Number is also imprinted on the:

- Vehicle Safety Certification Label.
- Frame rail.

To protect the consumer from theft and possible fraud the manufacturer is required to include a Check Digit at the ninth position of the Vehicle Identification Number. The check digit is used by the manufacturer and government agencies to verify the authenticity of the vehicle and official documentation. The formula to use the check digit is not released to the general public.

#### **VEHICLE IDENTIFICATION NUMBER DECODING CHART**

# VEHICLE EMISSION CONTROL INFORMATION (VECI) LABEL

#### DESCRIPTION

All models have a Vehicle Emission Control Information (VECI) Label. DaimlerChrysler permanently attaches the label in the engine compartment (Fig. 2). It cannot be removed without defacing information and destroying the label.

The label contains the vehicle's emission specifications and vacuum hose routings. All hoses must be connected and routed according to the label.

The VECI label contains the following:

- Engine family and displacement
- Evaporative family
- Emission control system schematic
- Certification application
- Engine timing specifications (if adjustable)
- Idle speeds (if adjustable)
- Spark plug and gap

The label also contains an engine vacuum schematic. There are unique labels for vehicles built for sale in the state of California and the country of Canada. Canadian labels are written in both the English and French languages. These labels are permanently attached and cannot be removed without defacing information and destroying label.

# BODY CODE PLATE

#### DESCRIPTION

#### **BODY CODE PLATE**

A metal body code plate is attached to the floor pan under the drivers seat (Fig. 3). Disengage the snaps attaching the carpet to the floor pan to read the information. There are seven lines of information on the body code plate. Lines 4, 5, 6, and 7 are not used to define service information. Information reads from left to right, starting with line 3 in the center of the plate to line 1 at the bottom of the plate (Fig. 4).

#### Fig. 3 Body Code Plate Location

- 1 SNAP
- 2 REAR CARPET
- 3 BODY CODE PLATE
- 4 SNAP
- 5 FLOOR PAN
- 6 FRONT CARPET

The last code imprinted on a vehicle code plate will be followed by the imprinted word END. When two vehicle code plates are required, the last available spaces on the first plate will be imprinted with the letters CTD (for continued).

When a second vehicle code plate is necessary, the first four spaces on each row will not be used because of the plate overlap.

# INTERNATIONAL SYMBOLS

#### DESCRIPTION

The graphic symbols illustrated in the following International Control and Display Symbols Chart

(Fig. 5) are used to identify various instrument controls. The symbols correspond to the controls and displays that are located on the instrument panel.

# FASTENER IDENTIFICATION

#### DESCRIPTION

The SAE bolt strength grades range from grade 2 to grade 8. The higher the grade number, the greater the bolt strength. Identification is determined by the line marks on the top of each bolt head. The actual bolt strength grade corresponds to the number of line marks plus 2. The most commonly used metric bolt strength classes are 9.8 and 10.9. The metric strength class identification number is imprinted on the head of the bolt. The higher the class number, the greater the bolt strength. Some metric nuts are imprinted with a single-digit strength class on the nut face. Refer to the Fastener Identification and Fastener Strength Charts (Fig. 6) and (Fig. 7).

# FASTENER IDENTIFICATION (Continued)

#### HOW TO DETERMINE BOLT STRENGTH

|  | Mark                         | Class  |             | Mark    | Class      |
|--|------------------------------|--|-------------|---------|------------|
| Hexagon<br>head bolt                               | 4                            | 4T<br>5T<br>6T<br>7T<br>8T<br>9T<br>10T<br>11T | Stud bolt   | No mark | <b>4</b> T |
|  | No mark                      | 4T   |             |         |            |
| Hexagon<br>flange bolt<br>w/washer<br>hexagon bolt | No mark                      | ДТ   |             | Grooved | 6Т         |
| Hexagon<br>head bolt                               | Two<br>protruding<br>lines   | 51   |             |         |            |
| Hexagon<br>flange bolt<br>w/washer<br>hexagon bolt | Two<br>protruding<br>lines   | 6T   | Welded bolt |         |            |
| Hexagon<br>head bolt                               | Three<br>protruding<br>lines | 71   |             |         | 4T         |
| Hexagon<br>head bolt                               | Four<br>protruding<br>lines  | 81   |             |         |            |

Fig. 7 FASTENER STRENGTH

# FASTENER USAGE

#### DESCRIPTION

#### **DESCRIPTION - FASTENER USAGE**

#### WARNING: USE OF AN INCORRECT FASTENER MAY RESULT IN COMPONENT DAMAGE OR PER-SONAL INJURY.

Fasteners and torque specifications references in this Service Manual are identified in metric and SAE format.

During any maintenance or repair procedures, it is important to salvage all fasteners (nuts, bolts, etc.) for reassembly. If the fastener is not salvageable, a fastener of equivalent specification must be used.

#### **DESCRIPTION - THREADED HOLE REPAIR**

Most stripped threaded holes can be repaired using a Helicoil<sup>®</sup>. Follow the vehicle or Helicoil<sup>®</sup> recommendations for application and repair procedures.

# METRIC SYSTEM

#### DESCRIPTION

The metric system is based on quantities of one, ten, one hundred, one thousand and one million.

The following chart will assist in converting metric units to equivalent English and SAE units, or vise versa.

| MULTIPLY              | BY        | TO GET                     | MULTIPLY | BY        | TO GET                |
|-----------------------|-----------|----------------------------|----------|-----------|-----------------------|
| in-lbs                | x 0.11298 | = Newton Meters<br>(N·m)   | N∙m      | x 8.851   | = in-lbs              |
| ft-lbs                | x 1.3558  | = Newton Meters<br>(N⋅m)   | N∙m      | x 0.7376  | = ft-lbs              |
| Inches Hg (60° F)     | x 3.377   | = Kilopascals (kPa)        | kPa      | x 0.2961  | = Inches Hg           |
| psi                   | x 6.895   | = Kilopascals (kPa)        | kPa      | x 0.145   | = psi                 |
| Inches                | x 25.4    | = Millimeters (mm)         | mm       | x 0.03937 | = Inches              |
| Feet                  | x 0.3048  | = Meters (M)               | М        | x 3.281   | = Feet                |
| Yards                 | x 0.9144  | = Meters                   | М        | x 1.0936  | = Yards               |
| mph                   | x 1.6093  | = Kilometers/Hr.<br>(Km/h) | Km/h     | x 0.6214  | = mph                 |
| Feet/Sec              | x 0.3048  | = Meters/Sec (M/S)         | M/S      | x 3.281   | = Feet/Sec            |
| mph                   | x 0.4470  | = Meters/Sec (M/S)         | M/S      | x 2.237   | = mph                 |
| Kilometers/Hr. (Km/h) | x 0.27778 | = Meters/Sec (M/S)         | M/S      | x 3.600   | Kilometers/Hr. (Km/h) |

#### **CONVERSION FORMULAS AND EQUIVALENT VALUES**

#### **COMMON METRIC EQUIVALENTS**

| 1 inch = 25 Millimeters | 1 Cubic Inch = 16 Cubic Centimeters |
|-------------------------|-------------------------------------|
| 1 Foot = 0.3 Meter      | 1 Cubic Foot = 0.03 Cubic Meter     |
| 1 Yard = 0.9 Meter      | 1 Cubic Yard = 0.8 Cubic Meter      |
| 1 Mile = 1.6 Kilometers |                                     |

Refer to the Metric Conversion Chart to convert torque values listed in metric Newton- meters  $(N \cdot m)$ . Also, use the chart to convert between millimeters (mm) and inches (in.) (Fig. 8). Thank you very much for your reading. Please click here and go back to our website. Then, you can download the complete manual instantly. No waiting.
